How AMI Optimizes RFID

Within the past two years, three significant factors have made some use of RFID a viable option for nearly every large- and medium-scale enterprise IT asset tracking:

1. Prices of RFID tags and readers have dropped markedly.
2. Reliability has increased to a factor of 99.9%.
3. International standards have been established for UHF passive RFID.

Despite these advances, however, a fully automated RFID solution – with fixed position readers intended to track asset location down to the rack level – remains exorbitantly expensive both in terms of initial implementation and long-term return on investment.*

Our experience shows unequivocally that the most cost effective solution now available combines the use of fixed position readers (at each entrance and exit) and handheld RFID (and barcode) readers operated by your personnel.

Aside from pure cost considerations, this hybrid solution provides additional flexibility. Every Data Center Manager knows there are times when you want to scan everything, and other times when you want to scan just one thing. The hybrid accomplishes this simply and easily by allowing RFID and existing barcode systems to work together seamlessly. You always have the right tool for the task at hand.

Since we can clearly demonstrate the superior value of this hybrid option, we have configured our suite of services accordingly.

Simply: We do it all for you.

System Configuration: We meticulously examine your inventory tracking requirements, existing IT tracking infrastructure, anticipated growth needs, budget considerations and all other relevant factors before developing a solution custom-tailored for you.

Hardware: We provide and install all necessary RFID hardware, including fixed RFID readers, handheld RFID/barcode readers and RFID tags.

Software: The newest version of our renowned AssetTrack™ software is a perfect complement to RFID, because while RFID gathers data more efficiently, what's most important still remains what you do with that data. AssetTrack™ delivers data confidence, providing unprecedented accuracy of counts, instant notification of discrepancies and precise location information.

In addition, AssetTrack™ 3.5 offers seamless compatibility with your existing asset management system, whether from HP, CA or your own proprietary system.

Training: We provide comprehensive training in the operation of both hardware and software.

Support: We maintain a team of highly trained and experienced support and service technicians, ready to answer questions and solve problems.

AMI is your turnkey solution to taking full advantage of advances in RFID. Contact us today to find out more and arrange for an obligation-free evaluation.
