### CubCrafters Introduces MyPanel

#### Allows pilots to configure their own instrument panel

Responding to exploding interest in personal electronics for the cockpit, CubCrafters has announced the availability of a new instrument panel option featuring space designated for the attachment of a tablet computer or similar device.

CubCrafters is calling the option the **MyPanel**®. It can be ordered as an option on any new CubCrafters Carbon Cub SS or Sport Cub S2 aircraft.

“The **MyPanel**® allows the pilot to craft his or her own solution for cockpit navigation, instrumentation, and reference solutions,” says CubCrafters General Manager **Randy Lervold**. “The array of software, hardware and functionality available on the iPad and other portable devices is astounding. As pilots we all have a preference for what data we’d like presented to us on our instrument panels. The new **MyPanel**® lets each aircraft owner create their preferred panel presentation. The market in this area is changing rapidly and the **MyPanel**® lets the owner/pilot change or update apps at their discretion rather than waiting for the aircraft manufacturer to update panel options. The proliferation of applications such as **WingX Pro 7** and **ForeFlight**, along with an array of affordable outboard GPS and AHRS choices, enables an almost infinite variety of configurations, and all at a fraction of the cost of traditional built-in instrumentation. We think this will be a popular option.”

The **MyPanel**® is configured to accommodate attachment of virtually any of the new breed of portable computers such as the **Garmin Aera 796**, as well as the **Apple iPad** and similar products.

The **MyPanel**® option is available immediately.

## **ABOUT CUBCRAFTERS**

CubCrafters, founded in 1980 by current owner and Chairman Jim Richmond, is located at Yakima Air Terminal/McAllister Field Airport (YKM) in Yakima, WA. CubCrafters' roots are in the 60-year history of classic 'taildragger' aviation, but its products and services - New aircraft, CAD-based design and engineering, CNC tooling and fabrication, Lean-manufacturing, and Award-winning tube and fabric aircraft restoration - are leading edge.

CubCrafters offers three all new, FAA-certified, ready-to-fly, aircraft: the second generation SPORT CUB S2, the follow on airplane to the original SPORT CUB...the long awaited redesign of the classic airplane that inspired the light sport category; The CARBON CUB, a stronger and more powerful version of the S2 with 180 horse power available for take-off and climb, making it the most powerful LSA aircraft in production; and TOP CUB, with useful load of over 1000 Lbs. the most capable two-place personal and utility aircraft in production.
